

S-23 Sierpinski Database

Design Document

Brand Identity

Since this is a database for a mining facility we kept an industrial theming, with influences from the SIGNALIS UI (which has a retro-futuristic CRT sort of theme). We used elements such as grids, sharp straight lines, and geometrical motifs in general.

SIGNALIS UI Example:

Color Scheme

Dark black and white UI using a singular accent color **#dc440e**.

Logo

Adapted from SIGNALIS assets, use geometrical shapes/theming.

Functionality

There are 2 steps, the home log in page, which users log into using their credentials, then they get to the main page from which they can either manage the database (in the case of admins) or view their current tasks. The main grid has information such as who the current user is and what their clearance level is, and a side menu which they can use to sort through the information they are searching for.
